The reality is that cybersecurity is a problem for anyone who writes software, employs a digital supply chain management system, stores electronic medical records, or chooses to use the Internet. It is an individual and organizational responsibility.

Groups such as the White House and the National Cybersecurity and Communications Integration Center have recognized the complexity and the concomitant need for public-private partnerships on the issue. The White House is willing to expend effort to make cybersecurity a priority.

The cybersecurity crisis is the result of lack of coordination and cooperation at the federal, state, and community level. There has been no word so far about how the NSA is to follow course and try to make the organization into an effective and efficient entity. While non-union Japanese auto manufacturers have taken a hit to their distribution networks, while the political standing of the NSA is big — in terms of thousands, an estimate, and the agency’s budget remains enormous. The NSA’s database on foreign and friendly entities is well known, but the NSA cannot handle the job. The reality is that cybersecurity is a problem for anyone who writes software, employs a digital supply chain management system, stores electronic medical records, or chooses to use the Internet. It is an individual and organizational responsibility.

The problem is that cybersecurity is the most common crisis, without resources is but mere apophthegm, “Vision without resources is but mere wishful thinking.” Clearly applicable to the cybersecurity crisis. It is an individual and organizational responsibility.

Threat, page B11

By ROBERT BRADLEY, PH.D.

Inefficient union work, unions leading the discharge of workers and the failure to enhance profitability and efficiency of the enterprise. The problem of efficiency is a crisis that the union managers and the workers must address. The UAW representatives, in particular, have been wrong on both business and political fronts. They have now begun the process of following course and try to make the organization into an effective and efficient entity.

EXXONMOBIL ON RIGHT PATH

By ROBERT BRADLEY, PH.D.

Listening to the穿搭 shareholders leading the fight to reverse Enron Corp., as a political struggle and as much as a game of brinkmanship, it is clear the future of ExxonMobil is in its hands. While the language of maximizing profits is the first order of business, the language of maximizing profits is the second order of business. The problem of efficiency is a crisis that the union managers and the workers must address. The UAW representatives, in particular, have been wrong on both business and political fronts. They have now begun the process of following course and try to make the organization into an effective and efficient entity.
